**LIMITS OF USE**

The tests have been carried out with solenoids at a temperature of 40°C and a voltage 10% less than rated voltage with a fluid temperature of 40°C. The fluid used was a mineral oil with a viscosity of 46 mm<sup>2</sup>/s at 40°C.

The values in the diagram refer to tests carried out with the oil flow in two directions simultaneously T = 2 bar (e.g. from P to A and the same time B to P).

In the cases where valves 4/2 and 4/3 were used with the flow in one direction only, the limits of use could have variations which may even be negative. Rest time: the values are indicative and depend on the following parameters: hydraulic circuit, fluid used and variations in hydraulic scales (pressure P, flow Q, temperature T).

Direct current : Energizing 60 ÷ 95 ms.  
De-energizing 25 ÷ 70 ms.

Alternating current: Energizing 12 ÷ 30 ms.  
De-energizing 10 ÷ 55 ms.
